Diamond **SERIES**

ORION MX-9005

Dual-mode detector, the dual detector have.

DUAL-MODE DETECTOR

MOD 1	MOD 2
4 meter	5 meter

Comfortable use of the first mode, and the second mode is 30% increase with depth and discrimination sensitivity detectors need not be any different.

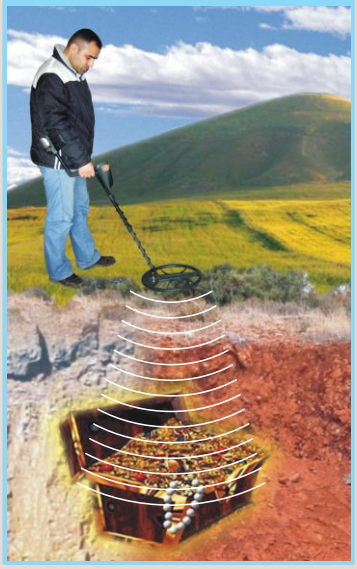

Digital lcd display detector Orion MX-9005i, you are the greatest help when you reach your destination. We've completed the task again and Orion MX-9005 model further by developing Orion MX-9005i model created. Orion MX-9005i now deeper, more sensitive and give more accurate results in structure.

Orion MX-9005i makes a different approach.

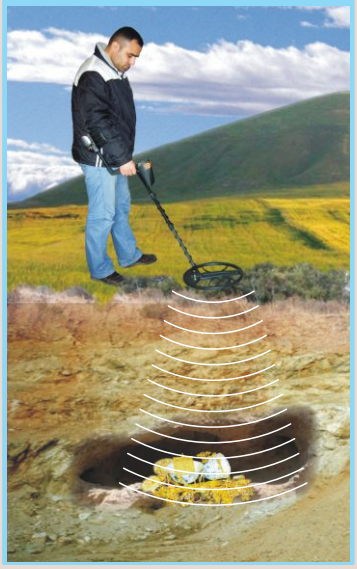

Soil inside the mystery of humanity always has been. To overlie much of the soil for them to arise again to keep up to date.

Orion MX-9005i with many years experience and clients' demands, has been completely re-shaped. Easy to use and with all kinds of land transport on the structure provides absolute harmony. Do not give misleading signals, very precise work, deeply detects. This device is an integral part of everyone's fond of treasure will become.

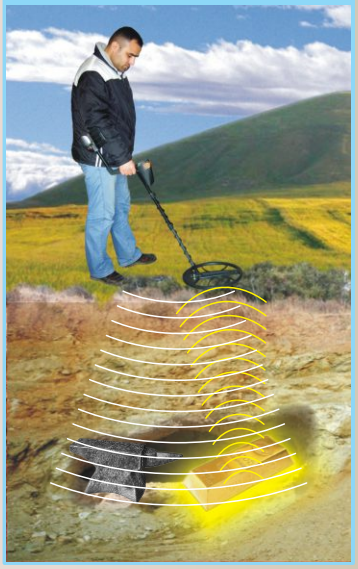

All kinds of soil and rock, the full efficiency, strict separation

Find a space and space in the metal detection

Valueless metals do not report. Gold separation.

Technical specifications

- Digital microprocessor control
- Illuminated LCD display
- Ensure full compliance with all kinds of soil for the land adjustment system
- Gold separation
- Metals such as iron and nails will not show
- The exact type of metal is detected
- Marble, stone, concrete and khorassan to pass from the signal
- Signal test the possibility
- Digital Depth determination
- Long-life battery system with charger

(Details on back page)

How many centimeters from the detection

KIND OF METAL MATERIAL	MOD1	MOD2
A coin	40-50	40-50*
Golden Bracelet	75-80	75-80*
Copper Bathroom Bowl	120-130	150-170
Cheese Tin	340-350	350-390
Maximum Depth	400	500

* 30% increase in sensitivity is provided.
Dimensions are shown in centimeters.

Above measurements were given for example. The more volume of metal mass is, the more perceptible distance extends. Perceptible distance increases in direct proportion with the duration of metal existence in soil. When the metal is contacted with soil, oxidation will occure and perceive volume will get bigger. For example, because of the oxide which a metal that has been remained under soil for years spreads, there is a possibility of being perceived from 3-4 metres and in a copper bathroom bowl as a cheese tin.

The device consists of these parts.

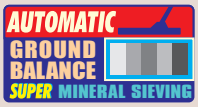

When you buy the device that all the parts needed for custom design products are placed inside the carrying case is way to reach you. All tracks in the bag for the special panel is available.

- 40 cm wide, deep search coil.
- Rods for the search coil.
- Detectors charger.
- Headphones.
- Custom carrying bag.
- User manual.

Considerable details.

All settings and results, you can see the LCD screen.

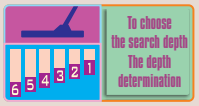

Mineral soil and plenty of variables, to prevent loss of time, auto-land system settings.

Long life, out of concern over the automatic control of the nature-friendly battery system.

Normal search mode, the metal of the valuable - worthless information see the possibility of immediate on-screen.

Besides the call to make the desired depth, the depth of the metal to a digital depth detection system.

Specially developed system of land setting all the soil structure provides the perfect harmony.

Marble, stone, concrete, thick and rich like khorassan mineral formation is not affected by the signal can pass.

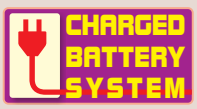

About the structure of the metal gives accurate results. Separation does not experience a loss in depth.

Precious metals from the gold to distinguish that.

To test the accuracy of the received signal allows you to reach the final results.

Battery system can be charged with battery can be easily charged. In this way, find the battery, battery replacement problem does not happen.

12.5 Khz frequency system with high-voltage transmission lines are not affected by and are able to search without affecting other frequencies.

The cave, cellar, tunnel and similar to them can detect hidden spaces.

The device will check all the functions, and then edit the microprocessor.
